# Overview

***Logistics***  
***Information SPO***

- **Previous Questions Received**
- **Difficulty Reports (DIREPs)**
- **SBSS Updates**

# Previous Questions Received

*Logistics  
Information SPO*

- **Report of Redistributable Excess Materiel (FTE)**
  - Question – Why are we receiving the Host Account's Routing Identifier (RID) in positions 67-69 for a Satellite Account's excess?
  - Answer – The SBSS is programmed to assign the Host RID on all FTE transactions.
- **RAMPS Asset Reporting Image (7WS)**
  - Question – Why is the first 7WS image missing the stock number and the remainder of the image is filled with zeros?
  - Answer – This should not be occurring and is a current DIREP (3313776)

# Previous Questions Received

*Logistics  
Information SPO*

- **RAMPS Asset Status Reporting (7LF)**
  - Question – I pushed an RBL XCA for a quantity of seven each for a stock number, so why does the 7LF reflect a Requisitioning Objective (RO) of zero?
  - Answer – If the stock number is in an Interchangeable & Substitute Group (I&SG) the RO is computed on the base Master (Relationship Code = M) stock number, not the Interchangeable (Relationship Code = I) stock number. In this example the stock number is in an I&SG, so the 7LF for the base's Master stock number would reflect an RO of seven (in this case the RBL quantity) and the 7LF for the base's Interchangeable stock number would reflect an RO of zero.

# Previous Questions Received

*Logistics  
Information SPO*

- **Item Record Load (FIL)**
  - Question – Why does a base receive a 092 (INPUT FSC/MMC NOT ON FILE OR IS INVALID – LGSCD) reject when they try to load a stock number with a budget code of O or L?
  - Answer – We discovered the base did not ensure the Materiel Management Aggregation Code (MMAC) was loaded in their SBSS account. We had the base process an FSC/MMC Record Load (BVL/BDL) to load the MMAC. NOTE: If that does not work or is not the problem, have the base call the SSG Field Assistance Branch (FAB) for assistance.

# Previous Questions Received

*Logistics  
Information SPO*

- **Indicative Data Change (FIC) & SNUD  
Periodic Output Format Catalog  
Management Data Changes (BMx)**
  - Question – Why does a base receive a 080 (BUDGET CODE INVALID – LGSCD) reject when they try to change a stock number from a budget code of 8, 9 or S to a budget code of O or L?
  - Answer – This should not be occurring and is a current DIREP (3382781)

# Previous Questions Received

*Logistics  
Information SPO*

- **Indicative Data Change (FIC) & SNUD Periodic Output Format Catalog Management Data Changes (BMx)**
  - Question – Why does a base receive a 080 (BUDGET CODE INVALID – LGSCD) reject when they try to change indicative data (e.g. RID, ERRCD) on a stock number with a budget code O or L?
  - Answer – This should not be occurring and is a current DIREP (3382781)

# Difficulty Reports (DIREPs)

*Logistics  
Information SPO*

- **MICAP on First Demand - Is not computing a demand level when the ERRRC is XF3 and the unit cost is greater than \$750 (3132984)**
- **7WS - Contains a blank NSN and zeros for all other fields (3313776)**
- **BMC/FIC - Does not work for Budget Codes L and O (3382781)**
- **DRA not produced when last 4 positions of document number begins with an alpha character (3084524)**

# SBSS Updates

**Logistics**  
**Information SPO**

- **Next RAMPS Reporting (D28) Release**
  - Field testing under way at Charleston
  - Projected world-wide fielding MAR 04
  - Correct 7WS images to have the Due-Out To Maintenance balance in positions 47-52 (DIREP)
  - Create 7WS images for RIDs F(n)(n) – (New Requirement)
- **RAMPS Reporting (D28) Concerns**
  - Re-leveling Input (LVL) - Generate a 4G transaction history for RAMPS Reporting for F(n)(n) RIDs (New Requirement)
  - Indicative Data Change (FIC) – Generate a 4G transaction history for RAMPS Reporting (New Requirement)
